

The SST forecast shows weak La Nina conditions for Oct-Dec through Jan-Mar, weakening slightly for Jan- Mar. The subtropical North Pacific SST and the SST in many of the other extratropical regions are predicted to be above average during all four forecast seasons. A slightly positive Indian Ocean Dipole is predicted for Oct-Dec through Dec-Feb, weakening for the later seasons.

Enhanced chances for above-normal precipitation are forecast for most of Indonesia and parts of eastern Australia from Oct-Dec through Jan-Mar.

IRI Multi-Model Probability Forecast for Precipitation for October–November–December 2017, Issued September 2017
